

# ORION DDoS Threat Protection

---

Alert. Assess. Address

**ORION DDoS Threat Protection adds a critical layer of security to protect Ontario's research, education, and innovation ecosystem**

Distributed denial of service (DDoS) attacks are becoming more common and severe. ORION DDoS Threat Protection ensures greater network resilience and reliability. Our inline system provides intelligent threat detection, mitigation and reporting enabling you to keep your network running smoothly.

## How does it work?

**Alert** - Identify suspicious traffic that could cause denial-of-service by using a powerful NETSCOUT Arbor cybersecurity system, an industry leader

**Assess** - Monitor Monday-Friday 9-5 and detect attacks in the network before they can reach your systems

**Address** - Get comprehensive incident reports and an annual summary of all DDoS alerts

## Benefits:

- High-quality protection Inline system detects and stops threats targeting your network
- No additional on-site equipment, software, or intervention required
- Safeguards vital network-connected applications: name servers, e-commerce, email, video, and voice
- Mitigates against DDoS attacks to avoid breaches which can cripple your network, causing downtime
- Allows your staff and network to stay focused on your core business
