

How ORION cuts your risk of service disruptions

DDoS attacks were at an all-time high in 2020, a year when the ORION community needed stable, reliable service more than ever.

That's why we launched **two new initiatives** to protect you against critical service disruptions: Network-wide protection and a proactive custom solution.

ORION DDoS Threat Protection

We launched ORION DDoS Threat Protection as a core service to protect everyone connected to the ORION Network. It alerts our team to a DDoS threat so we can contact the target and quickly mitigate the attack during normal business hours.

114 Threat interventions Network-wide
July 2020 - February 2021

33 Threat interventions Five organizations
October 2020 - February 2021

ORION Enhanced DDoS Threat Protection

We launched always-on, automated ORION Enhanced DDoS Threat Protection, a customizable, proactive solution for organizations needing 24/7 protection. It auto-mitigates attacks before damage can be done.

Thanks to ORION's rapid DDoS attack mitigations, in 2020, **116** Ontario RE&I organizations successfully **protected** and **maintained**:

Connection

Productivity

Reputation

Crucial Info

While ORION was protecting you in 2020, DDoS attacks were surging in Canada: more than 370,000. Globally, attacks exceeded 10 million.

377,000 DDoS Attacks
Across all Canadian industries

10,089,687 DDoS Attacks
Across all industries globally
